6 The Leaderboard 8

7 Operator Code of Conduct 8

> 1 INCOMING TRANSMISSION

```
> SYSTEM FAILURE DETECTED.  
> NETWORK STABILITY: 0%.  
> RECOVERY PROTOCOL ACTIVATED.  
> NEW OPERATORS REQUIRED.
```

Year 2026. For years the CIT Network ran quietly in the background – connecting knowledge, technology, intelligence and innovation through one central system known only as **THE CORE**.

At 09:00 the network detected an unknown anomaly. At 09:01 systems began shutting down. At 09:03 communication between sectors was lost. **At 09:05, THE CORE went offline.**

The network collapsed. Its core systems are dark. You and your teammates have been recruited as **Operators** – the people trusted to bring it back. To restore the network you will earn resources, recover lost data, and complete missions out in the real world.

This manual is your briefing. Read it once before the event and you will know everything you need. Nothing here reveals the puzzles themselves – only how the protocol works.

NO EXPERIENCE REQUIRED

If you have never touched a line of code or played anything like this before: **good – you belong here.** CIT:404 is built for complete beginners. Every phase has an easy entry point, your teammates cover each other's weak spots, and you can buy help whenever you are stuck. You are not expected to know anything in advance. Be curious, talk to your team, and try. That is the whole job.

> 2 YOUR SQUAD

You play as a **team of three Operators** sharing a single account.

- > **One team, one wallet.** The three of you share the same balance, inventory and progress. Money one operator earns is instantly available to the others.
- > **Each person has a callsign.** When you log in, type your own nickname – it just records who did what so your team can see who solved a challenge or spent the money.
- > **One shared access code.** Your team receives a single join code. All three operators enter the same code to connect.

:: CONNECTING TO THE NETWORK

1. Open the platform link the organizers give you (any phone browser works).
2. Choose your **team**, type your **callsign**, enter the **team access code**.
3. You are in. If you refresh or your phone sleeps, the session restores

automatically – you will not be kicked out mid-game.

KEEP YOUR CODE SAFE

Your team access code is the key to your wallet. Do not hand it to another team. If a device is lost, tell an admin – they can disconnect that one device without logging the rest of your team out.

> 3 THE ECONOMY

Everything in CIT:404 runs on two resources. Watch both.

CIT\$ – your **currency**. Earn it by solving challenges and completing missions, spend it in The Market on help and advantages.

Core Energy – your **restoration score**. It measures how much of the network you have brought back. Energy is what the leaderboard ranks you on – it is effectively your **score**.

:: FIRST BLOOD

The **first team** to solve a given challenge earns a one-time **First Blood** bonus – extra **CIT\$** and **Core Energy** on top of the normal reward. It pays to be fast, but every team that cracks a challenge still gets paid. First Blood is decided by the server; ties cannot produce two winners.

:: THE MARKET

Stuck? Spend **CIT\$** on help instead of burning time. The Market sells:

- > **HINTS** – nudges and partial solutions when you are stuck.
- > **INSURANCE** – protects your investment if a mission fails.
- > **BOOSTS** – advantages that change how a mission plays out.
- > **ACCESS** – unlock extra information or routes.

Everything you buy lands in your team's shared inventory, usable by all three operators. Spending wisely is part of the game – knowledge has a price, and so does wasting it.

THE LEDGER NEVER LIES

Every movement of **CIT\$** and **Core Energy** is written to a permanent record your team can view at any time. The Transaction Log names who spent what and when. If something looks wrong, show an admin – disputes are settled from this record.

> 4 THE THREE PHASES

The protocol runs in phases, and **only one phase is open at a time**. The admins (THE CORE) decide when each one opens. Tabs for phases that are not active appear locked – that is normal, your time will come.

:: PHASE I – DIGITAL ARENA

The on-screen phase. You solve short challenges in three families. Each solve pays **CIT\$** and **Core Energy**. You submit answers in the form of a **flag** – a short code that usually looks like CIT{...}. Find the flag, type it in, get paid.

CP – Computational Problems.

Logic and reasoning puzzles. Work out the answer from a description. The easy ones require pure thinking – no heavy programming needed to start.

CTF – Capture The Flag.

Something is hidden and your job is to find it. Look where most people do not: inside pages, files, messages. The flag is waiting to be uncovered.

DATA – Data Challenges.

You are given information – logs, records, fragments – and asked a question. The answer is in the data; you just have to read it the right way.

HOW A BEGINNER WINS PHASE I

Split the three families between the three of you and shout out what you find. Start with the one-star challenges – they are designed for someone seeing this for the first time. If you stall for more than a few minutes, **buy a hint**. A cheap hint that unblocks you is almost always worth more than the **CIT\$** it costs.

:: PHASE II – FIELD OPERATIONS

This phase leaves the screen. Missions send your team out into the real world to complete tasks. The flow is simple:

1. **Read the intel.** Each mission gives you a clue about a location. Work out where it points and go there.
2. **Get the code on site.** Once you physically reach the location, an admin gives you an access code that unlocks the mission. (You can also spend an item to reveal exact coordinates.)
3. **Choose your difficulty.** Each mission offers **EASY** / **MEDIUM** / **HARD**. Harder tiers cost more **CIT\$** and pay more **CIT\$** and **Core Energy**. Pick what your team can actually pull off.
4. **Complete the task and prove it.** An admin validates your proof on site and your reward lands in the wallet.

There is also a free **Supply Run** for teams who run out of **CIT\$** – a no-cost mission so nobody gets permanently stuck.

FIELD CONDUCT – THIS IS NOT OPTIONAL

Field missions involve real people and real public space. Operators who break these rules can be penalized or disqualified:

- > **Always ask consent** before photographing, filming or recording anyone. If a person says no, thank them and move on.
- > **Be respectful and polite.** You represent CIT Club and INPT. No harassment, no pressure, no blocking people's way.
- > **Stay safe.** Watch traffic, do not trespass, do not enter restricted or private areas, and stay with your team.

- > Nobody is forced to participate. Members of the public are bystanders, not players.

:: PHASE III – ENDGAME

The final phase. The truth about THE CORE is broken into **six fragments**, each locked behind a code you earn from the admins. Recover a fragment and you are paid in **CIT\$** and **Core Energy** – and you receive a piece of the story. Assemble all six and you learn what really happened the day the network fell.

- > FRAGMENTS RECOVERED: 0 / 6
- > STORY INTEGRITY: INCOMPLETE
- > DID YOU RESTORE THE SYSTEM... OR DID YOU JUST SET IT FREE?

> 5 ORDERS FROM THE CORE

During the event the admins can send your team messages directly.

Normal transmissions arrive in your messages panel. They are information – read them when you like.

Urgent orders take over your whole screen with a red countdown. You *must* acknowledge them. Completing the order in time pays a reward; letting the timer run out costs you **CIT\$** and **Core Energy** automatically – even if you closed the tab. Acknowledging an order is not the same as completing it; an admin confirms the real outcome.

WHEN THE SCREEN GOES RED

Stop, read the order, and act. The countdown is real and the penalty is automatic. Do not ignore an urgent order hoping it goes away – it will not.

> 6 THE LEADERBOARD

Standings are live and visible to every team. Teams are ranked by **Core Energy** (your restoration score), with total **CIT\$** earned as the tie-breaker. Solve challenges, complete missions, grab First Bloods and recover fragments – all of it feeds your rank. The board updates in real time, so a strong final push genuinely changes the outcome.

> 7 OPERATOR CODE OF CONDUCT

- > **Play your own game.** Do not share answers, flags or codes with other teams, and do not take theirs.
- > **Stay in scope.** Solve the challenges as designed. Do not attack the platform, the network, or the organizers' infrastructure – that is not part of the game and ends your event immediately.
- > **Respect people and place.** Field-conduct rules apply all day, everywhere.
- > **Help your teammates.** Three beginners who talk to each other beat one expert who goes silent. Every time.
- > **Ask the admins.** Stuck, confused, or something looks broken? Find an organizer. They would rather help than watch you struggle.

CIT:404

THE CORE HAS FALLEN

THE NETWORK IS WAITING, OPERATOR.

Earn. Recover. Restore. Or set it free.
